Moses [redacted]

Executive Summary

The purpose of this report is to develop the foundational components of a go-to-market (GTM) strategy for [redacted], using targeted interviews and secondary research focused on the client's priority market segments. Our analysis centers on the early-phase GTM elements, which include market segmentation, value proposition, partner profiles, pricing strategy, and messaging framework. Collectively, these insights establish an actionable roadmap for Jobago's entry into the HR technology space.

Final Scope

This report condenses the research done by our team into a set of findings and recommendations for each of the GTM strategy components requested by the client. As a result, it is limited to recommendations on the segmentation model, value proposition, ideal partner profile, collaboration model, messaging framework, pricing strategy, and sales strategy of [redacted] There are no findings/recommendations for the maintenance portion of a GTM strategy (e.g, metrics, launch plan, customer support), as these were outside of the client's desired scope. Primary market research was limited to a few local contacts, while secondary market research was focused on a set of firms identified by the client.

Segmentation Model

We segment the market into four high-value partner groups, including outsourced HR agencies, professional employment organizations, employer associations, and payroll/benefits providers. For each category, we analyzed five leading agencies to understand what they care about, how we should position our client's HR product, and where and when to reach them. Outsourced HR agencies care about delivering fractional and on-demand HR at scale without adding headcount, so we plan to sell by positioning the product as the workflow, compliance, and analytics engine behind their service model, meeting them at SHRM chapters, HR outsourcing events, their own webinars, and through targeted LinkedIn outreach. Professional employment

organizations care about efficient multi-state operations, payroll/benefits administration, and client retention, so we frame the product as the tech layer that modernizes and scales their service delivery, engaging them at professional employment organizations' trade shows, regional business associations, modernization webinars, and via outreach to COOs and operations leaders. Employer associations care about compliance, training, and member value, so we position the product as a co-branded compliance and HR workflow tool that enhances their programs, meeting them at state HR conferences, member workshops, and regional business events. Payroll and benefits providers care about reducing administrative complexity and differentiating their offering, so we sell the product as an automation and analytics add-on that deepens their value for SMB clients, reaching them at payroll/benefits industry events, risk and benefits forums, co-hosted webinars, and LinkedIn outreach to benefits advisors and payroll leaders.

Value Proposition

Jobago.ai presents a compelling value proposition to SME HR consultancies by enabling them to expand their service portfolio into the outplacement market using a cost-effective AI-powered platform. Consultancies can offer a modern alternative to traditional and expensive outplacement services, which significantly enhances their value proposition to SME clients. This integrated offering not only increases the HR consultancy's profits by expanding into the outplacement market but also directly benefits their clients through outplacement tools, which mitigate legal risks associated with layoffs and terminations, preserve employee goodwill, and improve corporate reputation during difficult transition periods. All of this positions the consultancy as a comprehensive strategic partner in human capital management.

Ideal Partner Profile

Our interviews showed that there are multiple pathways Jobago may pursue to find new clients. To create our IPP, the team contacted multiple consultancies, ranging from individual, one-person shops to multi-state HR consulting firms, and synthesized the

common factors, learnings, and industry best practices so that Jobago may be able to best know their customer. The main factor that we found would impact a consultancy's appetite to partner with Jobago is whether a pre-existing relationship already exists with the consultancy and other technology vendors. We identified this item as the main hurdle for Jobago, as it enables the consultancy to—by necessity—already have identified some level of tech-stack costing requirements for evaluating the tool and experience selling technological tools in the course of doing business.

We also want to note the importance of including small and medium-sized consultancies that have over 10 people. Our interviews revealed that the traditional one-man-show consultancies that emerge from departed members of larger consultancies or business executives can be important to business in solving localized challenges, but their impact can be limited by their personnel. Our medium-sized consultancies displayed significantly more appetite to adopt new technology due to their ability to absorb the learning curve with staff. Pairing that organizational capability with an openness to adopting new technologies creates a type of firm that would be a perfect target for implementation.

Finally, our research also identified a key area of consultancies we strongly believe could be a good opportunity for growth: turnover and restructuring consulting. On the advice of our interviewees, we recommend that Jobago investigate this consulting space separately from the HR consulting space, as they directly target businesses in distress that may need the services of an outplacement firm. With cutbacks internally, such businesses could be an opportune target for both outplacement and restructuring services. These consultancies likely also have experience working with existing outplacement firms, allowing them to create packaged solutions for rightsizing that could include both AI-assisted (Jobago) outplacement and human-to-human outplacement to fit each client's individual needs.

Combining all of these factors, we have identified our Ideal Partner Profile to be an HR or restructuring consulting firm with a modest headcount and current technology

vendors. As these firms grow and evolve, Jobago may be able to leverage its position to become a vital, industry-standard tool in these firms' toolkits and expand into subsequent consulting areas that are more difficult to penetrate on its own.

Tech Vendor/Collaboration Model

A white-label partnership is the ideal tech vendor collaboration model for Jobago.ai because it allows HR consultancies to adapt the product into their existing services. Through this approach, Jobago.ai would be able to leverage the preexisting brand of the HR consultancy and utilize the client network, increasing distribution. The recommended pricing strategy is to use a simple and scalable per-user/employee fee. This aligns with how competitor consultancies would price their outplacement services as per our research. This structure allows the HR consultancy to still maintain a healthy margin, estimated between 10-15%, while still maximizing platform adoption across their SME client base due to the affordability and efficiency of Jobago.ai's new AI solution.

Messaging Framework

In order to reach prospective clients, engagement with HR consultancies will be achieved through a variety of messaging mediums to boost both awareness and retention. Connecting with decision makers in HR consultancies and other prospective clients can be achieved by attending conferences such as the 'SHRM Annual Conference & Expo', 'Transform - The Future of Work Conference', and 'HR Technology Conference & Exposition'. These conferences provide a valuable opportunity to launch the product in an environment hosting professionals on the cutting edge of human resource management, while capturing early adopters who are critical to the future landscape of how decision makers conduct human resources management. Further, to retain clients and build credibility, it would be beneficial to establish Jobago as a thought leader by providing evidence-backed articles, executive briefs, or even a small webinar series through low-cost mediums like LinkedIn. Providing informative yet strategic content could put [redacted] into a favorable position with content about the rise of

AI-enabled career transitions, legal and reputational risks of unmanaged layoffs, and why SMEs need outplacement even more than large enterprises. These engagements strengthen touchpoints with our client base and drive our message to the forefront of the industry.

Pricing Strategy

Our research indicates that Jobago.ai's current positioning is similar to where a disruptor in the identity theft market, [redacted], was prior to its 2006 seed funding. At that time, Identity monitoring was available at a reasonable price point, but remediation was costly and largely unaddressed (To Catch a Thief). AI placement tools are widely available today; however, usage of them as part of traditional outplacement is rare, and outplacement is expensive (~$[redacted] monthly per person). As a result, we recommend a similar approach in pricing. Just as [redacted] brought monitoring pricing to remediation services, [redacted] should bring placement pricing to outplacement (Form S-1). Placement tools like [redacted]r are priced at $[redacted] per user per month (HUNTR Pricing Plans). Our primary market research indicates a [redacted]% markup is expected by SME HR Consultancies. Therefore, we recommend a price of $[redacted]per user per month, enabling partners to price at $[redacted] per user per month.

Sales Strategy/Distribution Model

We plan to sell [redacted]s HR product by partnering with outsourced HR agencies, PEOs, employer associations, and payroll/benefits providers who already support thousands of SMBs and need technology that helps them scale without adding headcount. We position our client’s products as the workflow, compliance, and analytics layer that powers HR services, from plugging into fractional HR models, multi-state PEO operations, state-specific compliance programs, to benefits/payroll advisory work. In this way, Jobago's client HR consultancies will be differentiated from the market, experience improved client retention, and deliver more value. We plan to reach these partners through SHRM and PEO conferences, state employer-association events, co-hosted webinars, and targeted LinkedIn outreach, offering white-label or co-branded versions,

referral programs, and bundled service deployments that give Jobago fast distribution through their existing networks.
